

Internal Audit — Audit Administrator Manual

Role: Audit Administrator (IA_AUDIT_ADMIN, usually held alongside Head of Internal Audit) **Owns:** master data, risk configuration, module settings, document and communication templates, escalation roles and auditor resources.

Configuration drives behaviour everywhere else in the module. Set it up in the order below — later steps depend on earlier ones.

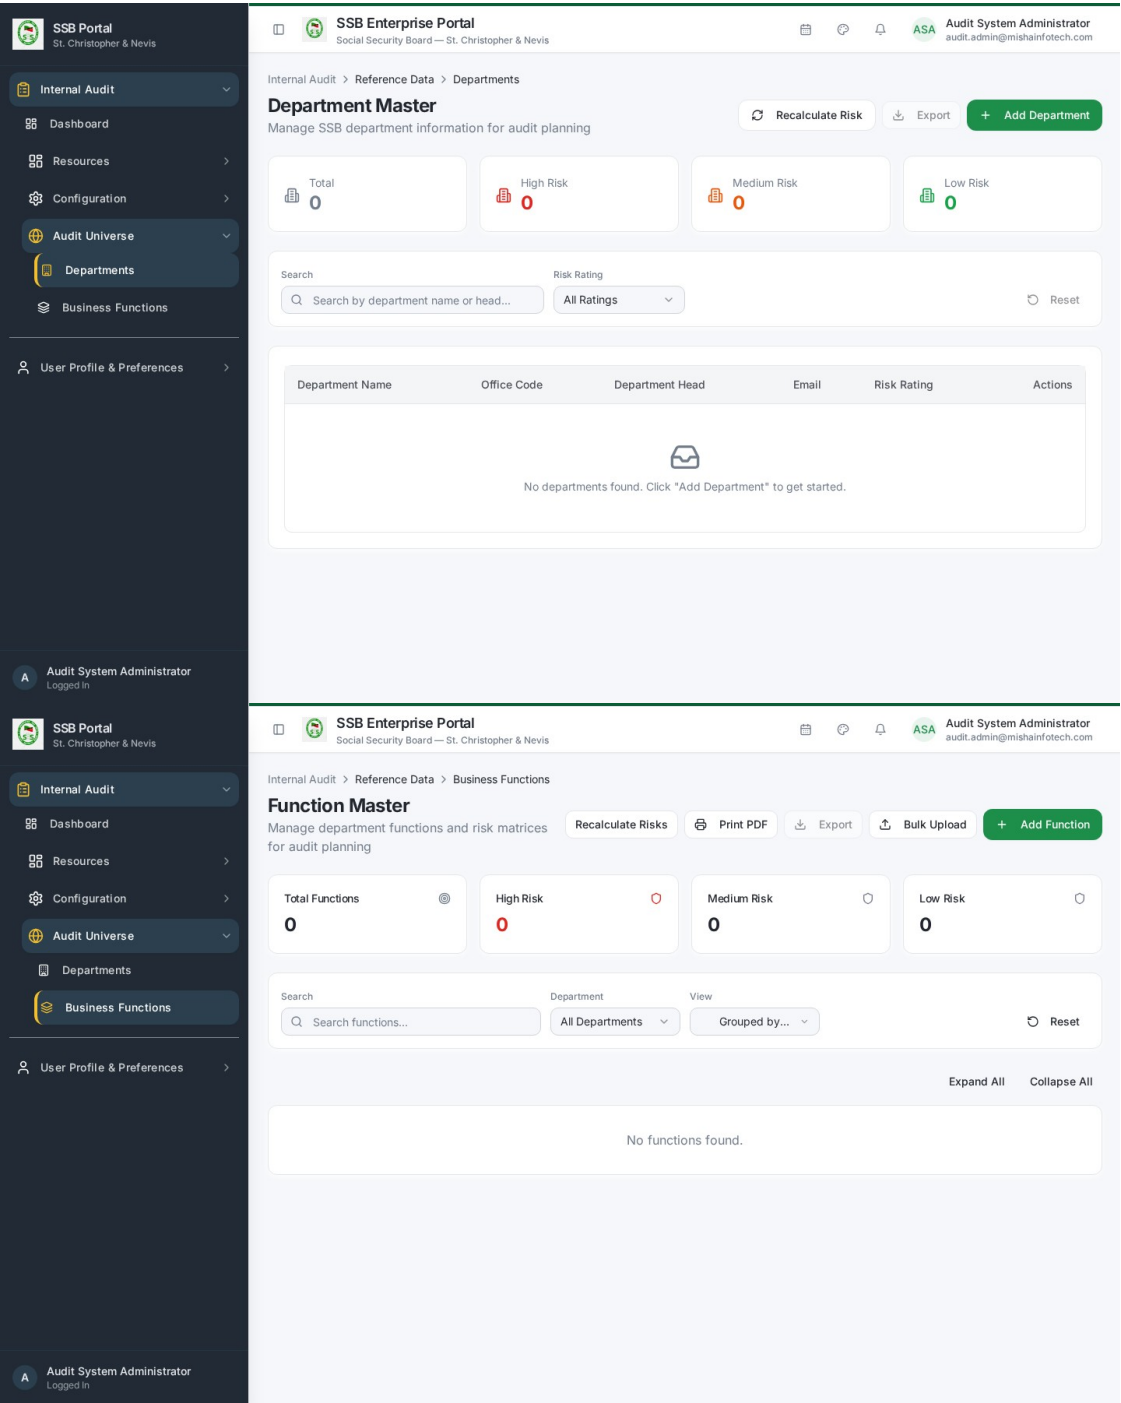

1. Golden path — set-up order

#	Step	Screen
1	Audit configuration and feature flags	/audit/config
2	Departments (audit universe)	/audit/departments
3	Business functions per department	/audit/functions
4	Auditor profiles	/audit/auditors
5	Risk configuration (scales, weights, thresholds)	/audit/risk-settings
6	Risk assessments and register	/audit/risk-assessment, /audit/risk-register
7	Escalation roles and SLA / notification rules	/audit/escalation-roles, /audit/config
8	Document and output settings	/audit/document-templates
9	Communication templates	/audit/templates
10	First annual plan	/audit/audit-plans

2. Departments and business functions

Departments (/audit/departments) links the organisation's departments into the audit universe: office, head of department (a real profile), contact email and phone, status and the derived risk rating. This is the only department list the module uses — the Risk Register and every engagement read from it.

Business Functions (/audit/functions) records the functions inside each department, each with a risk level. Functions are the unit that is risk-assessed and put in scope on an engagement.

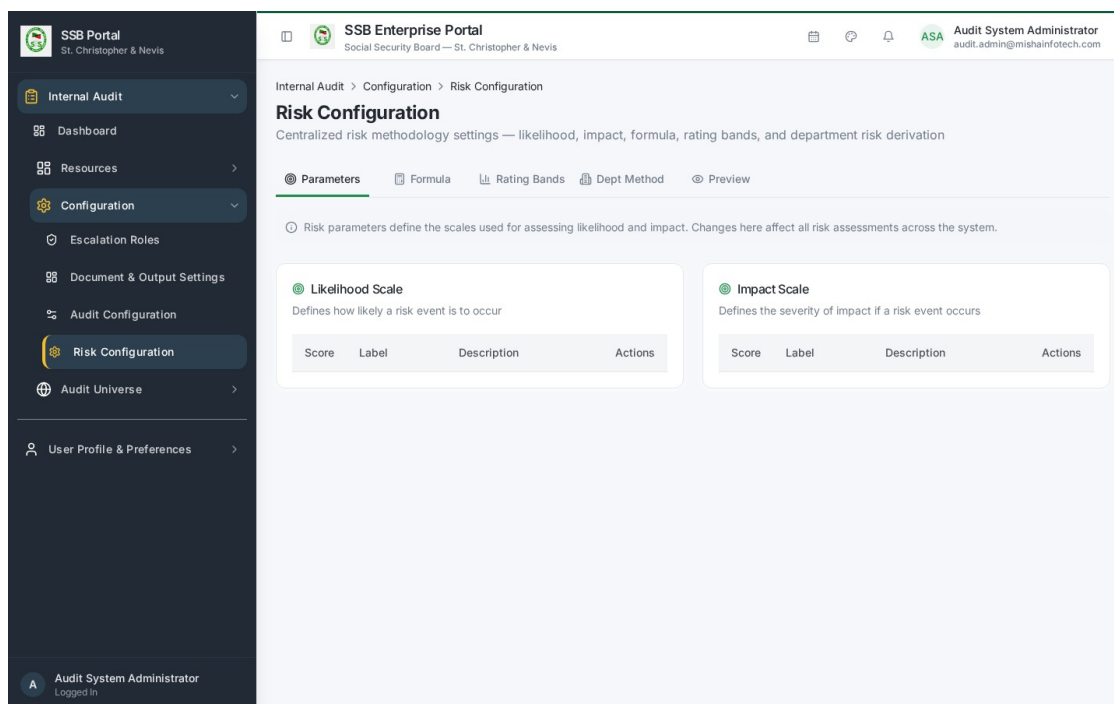

3. Risk configuration

/audit/risk-settings defines the scoring model used everywhere:

Setting	Effect
Likelihood levels (1–5)	The vertical axis of the risk matrix
Impact levels (1–5)	The horizontal axis
Risk criteria and weights	How factor scores combine into a risk score
Classification thresholds	Score bands for Low / Medium / High / Critical
Control effectiveness levels	The percentage by which effective controls reduce inherent risk
Audit frequency by risk band	How often an entity should be audited — feeds plan proposals

Changing thresholds re-classifies existing entities the next time they are assessed; it does not rewrite historical assessments.

Risk configuration

4. Risk assessment and register

- **Risk Assessment** (/audit/risk-assessment) — score each function against the configured criteria. Saving an assessment synchronises the department's risk rating.

- **Entity Risk Summary** (/audit/entity-summary) — consolidated position per entity.
- **Risk Matrix** (/audit/risk-matrix) — the heat map presented to the audit committee.
- **Risk Register** (/audit/risk-register) — the standing register, keyed on department and business function.

5. Module configuration

/audit/config groups the operational settings:

Section	Controls
Planning engine	Audit frequency defaults, planning horizon, capacity assumptions, the Revise-Plan guard (Block / Warn / Allow)
Approvals	Which lifecycle steps need approval and by which role
Activity types	The catalogue of fieldwork activity types
Notifications & SLA	Response deadlines, reminder lead times (for example 7 / 3 / 1 day), overdue escalation intervals
Reference settings	Severity labels, ratings, dispositions
Feature flags	Which optional Internal Audit surfaces are enabled

Planning Engine

Planning Priority Score Weights

Configure the weight each factor contributes to the composite priority score. Total should equal 1.0 (100%).

Total Weight: 0% Weights must sum to 100%

Factor	Weight	Percentage	Description	Edit
--------	--------	------------	-------------	------

Risk Band Frequency Policy

Maximum months between audits for each risk band. Functions exceeding this are flagged as overdue.

Risk Level	Max Months Between Audits	Description	Edit
------------	---------------------------	-------------	------

Scoring Parameters (Global)

Configurable multipliers and constants used by the scoring engine. Supports scope precedence: Scenario → Plan → Function → Department → Global.

Parameter	Group	Value	Scope	Version	Edit
No parameters configured

6. Escalation roles

/audit/escalation-roles maps each escalation level to a real office holder — for example overdue action → department head → director → Head of Internal Audit. Escalation notifications resolve their recipients from this register, so keep it current when people change roles.

7. Documents and communications

- **Document & Output Settings** (/audit/document-templates) — letterhead, signature blocks, footers and disclaimers used on generated audit letters and reports, and the numbering format for engagements, findings and actions.
- **Communication Templates** (/audit/templates) — opens the platform’s Core Template Designer filtered to the AUDIT module. Every Internal Audit notification is a catalogued event with published Email and In-App template versions. Edit content there; never create a parallel audit-only mail or SMS mechanism.

8. Auditor resources

Screen

Auditor Profiles (/audit/auditors)

Purpose

Link a platform profile to an auditor record with specialisation, qualification and status. **A person only counts as audit team once they have an auditor**

Screen	Purpose
	profile — this is what separates auditors from management respondents.
Workload & Capacity (/audit/workload)	Available days per auditor against planned engagement days
Auditor Leave (/audit/leave)	Leave and vacation, subtracted from capacity
Time Tracking (/audit/time-tracking)	Actual hours per engagement and activity

Import System Users (68)

How the Auditor Registry Works

Users are first created by the IT team in **System Administration** → **User Management**. Then, from this page, you **import** those users into the Audit Registry and assign them audit-specific roles (e.g., Lead Auditor, CAE). When an auditor leaves or is reassigned, set them to **Inactive** — their history is preserved but they won't appear in new assignment dropdowns.

👤 68 system users 🟢 0 active auditors 🔴 0 inactive ⚡ 68 available to import

9. Roles and permissions

The five Internal Audit roles and the entitlements behind each screen are administered in the platform's Role & Permission screens. The key registry actions are:

Module	Actions
internal_audit	view
audit_plans	create, edit, submit
plan_approval	approve, reject
audit_engagements	create, edit, assign, launch, close
activity_workbench, control_testing	execute
evidence_management, working_papers	create, edit
findings_recommendations	create, edit, approve
management_responses	create, edit
action_tracking	create, edit, close
follow_up_tracker	create, edit, close
audit_report_center	create, issue
quality_review	create, approve

Module	Actions
plan_closeout	approve, close
audit_configuration	configure
audit_risk_configuration	view, edit, configure
risk_register, risk_assessment	create, edit

Grant these to the five roles — Head of Internal Audit, Lead Auditor, Audit Team Member, Quality Reviewer, Management Respondent — rather than to individuals.

10. Administrator health checks

Frequency	Check
Weekly	Communication Compliance report — every required audit notification delivered
Monthly	Auditor profiles and escalation roles still match the org chart
Quarterly	Risk configuration still matches the approved methodology
Annually	Audit universe refresh: new departments and functions added before planning starts

Document Control — Version History & Change Log

Document owner: Head of Internal Audit **Classification:** Internal

Review cycle: Annually, or on any change to the Internal Audit module.

Version	Date	Author	Summary of change	Reviewed by	Approved by	Approval date
1.0	2026-08-30	Internal Audit /	First issued manual, generated from the live TEST	Lead Auditor	Head of Internal Audit	<i>Pending</i>

Version	Date	Author	Summary of change	Reviewed by	Approved by	Approval date
		Platform Team	environment (routes, tabs, governed commands and screenshots).			

How to record an update

1. Add a new row at the top of the table for every content change — never edit a released row.
2. Increment the minor version (1.1, 1.2 ...) for clarifications and screenshot refreshes; increment the major version (2.0) when a process, role or gate changes.
3. State the change in business terms (what a reader must now do differently), not file edits.
4. The manual is only “released” once the Head of Internal Audit records an approval date. Until then it is marked *Pending* and must not be used as certification evidence.
5. Re-export the PDF and DOCX from the Internal Audit User Manuals page after each approval.

Change log

Version	Change	Sections affected
1.0	Initial release.	All
